

Murad Munir Hamad

Software Engineering Student

murad.hamad.2004@gmail.com | [LinkedIn: Murad Hamad](#) | [GitHub: MuradHamad](#) | website: muradhamad.dev

EDUCATION

University of Petra Amman, Jordan

Bachelor of Science in Software Engineering- 4/4 GPA

Expected Graduation: July 2026

TECHNICAL SKILLS

- Java & Object-Oriented Programming: proficient in OOP principles including inheritance, polymorphism, encapsulation, and abstraction using Java.
- Data Structures & Algorithms: Understanding of core data structures (arrays, linked lists, stacks, queues, trees, hash maps) and fundamental algorithms including sorting, searching, and recursion; applied in problem-solving exercises and academic coursework.
- Agentic Coding: proficient with AI-powered development tools such as Cursor and OpenCode
- JavaScript: solid understanding of core JS fundamentals including DOM manipulation, events, and asynchronous programming.
- Node.js & Frameworks: experience with the Node.js runtime, React.js for UI development, and Express.js for building RESTful APIs.
- Software Engineering: knowledge of UML diagrams including use case, class, sequence, component, and deployment diagrams.
- Responsive Web Development: built full-stack applications with CRUD operations
- Database knowledge: Relational databases (Postgresql) non-relational databases (Mongo)
- Project & Workflow Tools: Jira, Notion
- Workflow Automation: basic knowledge in **n8n**:
- Git/GitHub: basic commands.
- Latexa and overleaf
- ORM like Prisma

SOFT SKILLS

- Strong English communication skills (written and verbal)
- Collaborative team player with experience in Agile environments
- Content creation skills

PROJECTS

Electronics Shop — E-Commerce Web Application

GitHub: github.com/MuradHamad/Electronics-Shop

- Developed a full-stack e-commerce application for electronics products
- Implemented CRUD operations for product listings, shopping cart, and user management
- Built with Node.js backend, handling RESTful API endpoints and server-side logic
- Designed a responsive front-end for seamless browsing across devices

Pneumonia Severity Assessment System — Graduation Project (AI Web Application)

GitHub: github.com/MuradHamad/pneumonia-severity-assessment

- Developed a full-stack AI-powered web application that analyzes chest X-ray images to assess pneumonia severity, built with Django, SQLite, and Tailwind CSS
- Trained and integrated a custom DenseNet121 deep learning model using PyTorch, achieving multi-class severity classification (Normal, Mild, Moderate, Severe)
- Implemented Grad-CAM heatmap generation to visually highlight regions of the X-ray influencing the model's prediction, improving clinical interpretability
- Managed model artifact versioning by hosting large files as GitHub Release assets, enabling reproducible deployments without bloating the repository
